## Composite material - Wikipedia

A composite material (also called a composition material or shortened to composite, which is the common name) is a material made from two or more constituent materials with significantly different physical or chemical properties that, when combined, produce a material with characteristics different from the individual components. [Composite | Definition of Composite by Merriam-Webster](#)

How It Works. One of the most well-known composites in the finance world is the Dow Jones Composite Average, which is a price-weighted average of the 65 companies that compose the Dow Jones Industrial Average, the Dow Jones Transportation Average, and the Dow Jones Utility Average.

## Composites - plm.automation.siemens.com

In the quest to make products lighter yet stronger, manufacturers are increasing their use of composite materials. It is also prohibitively expensive to create prototypes of products made from composites, so simulation must play a key role in the development of new products using laminate composite materials.

## What Are Composites? - Composites 101 | CompositesLab

Simply put, composites are a combination of components. In our industry, composites are materials made by combining two or more natural or artificial elements (with different physical or chemical properties) that are stronger as a team than as individual players.
