### Kinetic and Potential Energy - Difference and Comparison ...

Kinetic energy is energy possessed by a body by virtue of its movement. Potential energy is the energy possessed by a body by virtue of its position or state.

### Kinetic energy vs. Potential energy - Softschools.com

Kinetic energy vs. Potential energy Energy is the ability to do work. Objects can have stored, or potential, energy when work has been done (such as raising an object in the air) or by virtue of their position (such as sitting at the top of a hill).

### Kinetic and Potential Energy Guide -

saveonenergy.com

Kinetic And Potential Energy Working Together All forms of kinetic energy are the result of a previous state of potential energy. For example, the stored chemical potential energy of a battery converts to electrical kinetic energy to transport electricity to a light bulb, which radiates thermal kinetic energy.

### What is kinetic energy? (article) | Khan Academy

Kinetic energy is the energy an object has because of its motion. If we want to accelerate an object, then we must apply a force. Applying a force requires us to do work. After work has been done, energy has been transferred to the object, and the object will be moving with a new constant speed. The

### Examples of Potential Energy - examples.yourdictionary.com

Potential energy is mechanical or stored energy from an object that comes from factors such as its position relative to others, internal stress, electric charge or its condition rather than motion. This object has the capability of producing energy as these conditions change - this energy could be kinetic energy, chemical energy, radiant energy, thermal energy or sound energy.

### Potential energy - Wikipedia

For small height changes, gravitational potential energy can be computed using  $mgh$ , where  $m$  is the mass in kg,  $g$  is the local gravitational field (9.8 metres per second squared on earth) and  $h$  is the height above a reference level in metres.
